Grund- och avancerad utbildning

## **Course analysis BINP11 Bioinformatics and Sequence Analysis, autumn 2019**

### **Summary of the course evaluation**

Number of answers: 19. Overall the students were pleased with the course (Overall average 3.1). The students especially appreciated the interaction with the teachers and the high level of the course, but suggested improvement regarding the number of assignments and hand-ins.

### **Comments from the teachers team**

The teachers on the course considered that the course is intense and the students are learning a lot. This was also reflected in the number of students that passed the examination with distinction.

### **Evaluation of changes made since the previous course**

Since there were both new teachers and head the course leader changed, only updates to the material was done.

### **Suggested changes for the next course**

The next time the course is given we plan to restructure the course to make it easier for the students to follow. The teaching material will change in order to adjust to online teaching of lectures and new material will be added early to incorporate reproducible research early in the programme.
