Course analysis BIOR20 Sensory Biology, autumn 2019

Summary of the course evaluation

Number of answers: 13. The course has been given for many decades and continuously improved and tuned to student and teacher comments. The course is generally much liked and was so also this year. The students particularly like the lectures and compendia (over a textbook), and also the exams split into four parts at different times. The students were also happy about the practicals, and the individual project. The main concern with the course was too little time for tutorials. We tested a new format for tutorials, which seems to have been much appreciated, with the exception that we need to increase the time for tutorials.

Comments from the teachers team

The teachers agree that the new format for tutorials worked well but need a little more scheduled time.

Evaluation of changes made since the previous course

The new format for tutorials made a clear improvement.

Suggested changes for the next course

Tutorials will get 50% more time.
