Course analysis BIOR67 Fisheries Ecology, autumn 2019

Summary of the course evaluation

Number of answers: 7. Overall the students were very pleased with the course (grade 4), but called for more detailed information on some parts. The students especially appreciated the field project (4.9) and the seminars (4.7). Some called for more lectures. Others appreciated projects instead of lectures. Some called for more time and preparation for the stock assessment.

Comments from the teachers team

The course went almost as expected, except for the field part. The trawl boat lost two trawls, which made that excursion a failure with no catch and overall few fish to study in the lab. The number of students maybe required one more teacher on modeling projects.

Evaluation of changes made since the previous course

There were no major changes.

Suggested changes for the next course

Devote more time for student feedback to project reports.
