Course analysis BIOR75 Cellular and molecular immunology, spring 2019

Summary of the course evaluation

Number of answers: 13. Overall the students were very pleased with the course (grade 4.2). The students especially appreciated the seminars and learning from original research papers. The lectures were generally well appreciated. Improvements in the distribution of seminars and specific papers were suggested.

Comments from the teachers team

The teachers on the course considered that the course was performed in a successful manner, without any major complaints.

Evaluation of changes made since the previous course

This was the first time the course was organized by the current course leader. Since the previous year we changed the number of seminars and the majority of the papers used for the seminars. We also changed the course lab and added a few new lectures and removed a couple of clinical immunology lectures. The changes were apparently appreciated by the students.

Suggested changes for the next course

The next time the course is given we plan to make several improvements. First, we will try to better distribute the seminars and slightly change the way they are organized. We will change

the order of lectures, and add a new lecture about immunological methodology.
