Course analysis BIOR82 Aquatic Ecology, spring 2019

Summary of the course evaluation

Number of answers: Overall the students were very pleased with the course (grade 4.4). The students especially appreciated teacher motivation and feedback (4.8), the freedom to choose topics to study, the individual literature project (4.5), the experimental module about plankton communities and environmental change (4.5) and course leadership (4.9), but suggested improvement regarding the debate about sustainable management about the Baltic Sea.

Comments from the teachers team

The teachers on the course considered that the course went really well and that the student group was mostly motivated and ambitious. A little unfortunate with the overweight of Swedish speaking students who easily switch from English during group work for instance.

Evaluation of changes made since the previous course

Nothing major was changed since the last course.

Suggested changes for the next course

The next time the course is given we plan to rethink how to do the module about the Baltic Sea.
