## COURSE ANALYSIS

*Date* 2021-03-25

Main Teacher: Dan-E. Nilsson

Number of students: 18

Number of answers: 6

Grades:

Department of Biology  
Education- Bachelor's and Master's  
level

### **Course Analysis BIOR20 Sensory Biology, autumn 2020**

#### Summary of the course evaluation

The student's review of the course was as positive as anyone could possibly wish for. On all quality points the course got an average rating between 4 and 5 on the 1-5 scale. It is impossible to aim for better results given that all students are not identical. This course was also unusual because of the pandemic, but the evaluation was still very similar so previous years, and did not identify anything obvious that should be changed.

#### Comments from the teachers team

The teachers were mainly concerned with problems of online teaching. We initially decided not to record lectures in the hope that this would give the lecturers an attentive online audience. But we soon had to abandon this strategy and record lectures because one student needed recorded lectures to cope with unstable internet connections. After this, the attendance dropped dramatically, making lecturing rather unrewarding for the teachers. For next course, we hope to be able to give normal real-life lectures again.

#### Evaluation and changes made since the previous course

This was an unusual year because of the pandemic, and all lectures were given online. It is thus not possible to compare this year's course with previous years.

### **Suggested changes for the next course**

A problem this year was that assessments were handed in by fewer students than normal, and it is hard to know why this is so. Even in normal years, some students do not hand in an evaluation. Some kind of incentive to hand in a course evaluation could possibly be tested next year.

### **Other teachers involved in the course**

Cody Manchester, Eric Warrant, Glenn Svensson, Martin Andersson, Michael Bok, Marie Dacke, Marjorie Lienard, Olle Anderbrant, Stanley Heinze
