Number of answers: 21

Grades: ??

Department of Biology
Education- Bachelor's and Master's
level

Course Analysis BIOR21 Toxicology, Spring 2021

Summary of the course evaluation

Overall ok. Some aggravating comments such as teachers are “oldish”. Not ok for students to say this. We cannot say students are “childish”.

Comments from the teacher’s team

- Teachers team satisfied
- Always surprised over the lack of laboratory work before they come to this course.
- There laboratory handling is greatly increased after this course.
- Also, the lack of knowledge in cell biology is striking
- In general, the students are kind and we are very excusing about their “incompetence” really trying to help them to improve.
- Always sad that student’s study for a test and not for knowledge! From the start they are so occupied with the test. This thinking must be abrogated.

Evaluation and changes made since the previous course

We always try to increase the clarity in instructions, however, there must be a limit because this is a university course! We cannot feed the students with everything. The students have a

responsibility on their own just like in any job. Sometimes it feels like they still think they are in grade school.

Suggested changes for the next course

The course is changed with more modern practicals in line with the European strive to reduce animal experiments with specific aim at molecular initiating events and adverse outcome pathways.

Other teachers involved in the course

Atena Malakpour-Permlid, Andreas Tinnert, John Stegmayr, Martina de Santis, Leif Bjellin, Anna Forsby, Kathrin Zeller, Fredrik Johansson
