COURSE ANALYSIS

Date 2021-03-29

Main Teacher: Marita Cohn

Number of students: 16

Number of answers: 8

Department of Biology
Education- Bachelor's and Master's
level

Course Analysis: BIOR61 Molecular Genetics, spring 2020

Summary of the course evaluation

In the evaluation the students graded the “course” 3,4 and the Corona adjustments to 3,4. The criticism was primarily regarding the on-line examination, which needed more information beforehand. The level of the course was appropriate (3,8) and the students had enough pre.-knowledge (4,6).

Comments from the teachers team

The teachers are OK with the results, but had to make many new and quick adjustments with labs (which were performed IRL and required a lot of work) and with on-line exam. On-line examination was complicated since this was the first time it was applied.

Evaluation and changes made since the previous course

Adjustments/changes were made primarily due to the Covid-19 situation (see above).

Suggested changes for the next course

The course will be paused from 2021 and onwards so no changes are planned

Other teachers involved in the course

Allan Rasmussen, Mats Hansson, Olivier van Aken, Claes von Wachenfeldt, Anna Runemark, Torbjörn Säll
